LIST.

• LIST

— The page.jsx will fetch API by using a custom hook

1) Create a custom hook called "useFetchPagination"

• The hook will get **page**, **per-page**, **url** and will return an array with products with per-page size fetching the API with limitation. (Ex: **/products?limit=per-page**)

2) Create the <ProductCard/> component, that will be filled with the product data.
